

SCD-Related Cardiopulmonary and Kidney Disease

What it covers

Highly sensitive and specific tests for SCD-related cardiopulmonary and kidney disease.

Why it matters

Highly sensitive and specific tests for SCD-related cardiopulmonary and kidney disease. This is important because SCD-related cardiopulmonary and kidney disease are common causes of death in young athletes. Early diagnosis and treatment can significantly reduce the risk of death.

Who it affects

- **Hypertension:** High blood pressure is a common cause of SCD-related cardiopulmonary and kidney disease.
- **SCD:** Sudden cardiac death is a leading cause of death in young athletes.
- **Pulmonary disease:** Lung disease is a common cause of SCD-related cardiopulmonary and kidney disease.

What are the highlights

- **Hypertension:** High blood pressure is a common cause of SCD-related cardiopulmonary and kidney disease.
- **SCD:** Sudden cardiac death is a leading cause of death in young athletes.
- **Kidney disease:** Kidney disease is a common cause of SCD-related cardiopulmonary and kidney disease.

Total number of panel recommendations: 13
