

Critically Ill Patient with COVID-19

without confirmed or suspected VTE or other indication for therapeutic anticoagulation (AC)

The patient has an immediately life

ASH Guideline Panel Suggests
Prophylactic-intensity AC
rather than intermediate- or therapeutic-intensity AC

Patient with COVID-19 being discharged from hospital without confirmed or suspected VTE, or other indication for therapeutic AC

ASH guideline panel suggests
No outpatient post-discharge AC
rather than post-discharge AC
